Application : LabQuest

SDG 4 – Quality Education

Problem:

Many students struggle to understand science experiments because learning is often based on theory without enough interactive activities. This makes it difficult for students to visualize scientific concepts and apply them during experiments.

Impact:

The lack of interactive learning reduces student engagement and interest in science subjects. As a result, students may have weaker understanding of scientific concepts, lower motivation to learn, and difficulty performing experiments effectively.

Solution:

LabQuest provides an interactive science learning platform that supports students through experiment guidance, learning materials, quizzes, and assignment features. The platform allows teachers to update learning materials, quizzes, and assignments more efficiently, ensuring students can access the latest educational content easily. In addition, LabQuest allows students to calculate and monitor their own assignment marks, helping them stay more aware of their academic performance and progress while creating a better learning experience aligned with SDG 4 – Quality Education.
